4th May 2019

Message from the partners of Auctus Metal Portfolios:

We are extremely excited to officially roll out to our international client base our physical metal portfolios balancing algorithmic system. Several of our long-standing clients have been actively managed by our system for several years now, but our official global launch was delayed whilst we set up our necessary infrastructure. We have now completed the build of our state-of-the-art vaulting database system and live price feed vaulting portal supported by the already developed and trademarked algorithm systems. We have also incorporated new bullion dealership partners, providing the essential liquidity required in the metals traded. We also required a comprehensive audit of our systems by BDO Global, which was completed in March 2019 to verify our net-after-cost performance results to clients.

Developed over the last 7 years and perfected during the last 2 years, we are taking the classic '*asset diversification actively managed model*' which is religiously followed by the world's most successful asset money managers and incorporating these same principals to precious metals, as opposed to where typically investors will simply buy gold or silver and hold it in a vault.

Unique long-term cycles, multiple pricing ratios, supply-demand dynamics and distinct trading patterns have been clearly recognised, and our models presently analyse over 50 input variables that are monitored daily and self learning from an historical price database relationship analysis going back over 50 years.

We effectively recognise pricing anomalies between the classic 5 investment metals of gold, silver, platinum, palladium and rhodium and re-weight and balance the portfolios when our algorithms trigger trading instructions. On average we have historically re-balanced clients physical portfolios 5 to 6 times a year, although in some years that could be just once and in other years up to 10 times.

Performances of the models have outperformed our overall expectations, and we have gone to great lengths to thoroughly and retrospectively back-test our results. The models have been analysed over all historical economic market event and periods during the last 50 years to prove consistent out-performances in this physical asset class over and above any static portfolio physical precious metal holding could achieve.

Always full physical metal investment allocation, zero paper trading or collateralisation. Held fully in the client's sole named vaulted account held with third party vaulting within free-trade zones security premises.
